Reducing Risk of Coronary Artery Disease in Families

Study Volunteers Needed

The South Australian Health and Medical Research Institute is conducting a study on prevention of Coronary Artery Disease in people who have a family history of this illness.

If you are:

- between 40-70 years of age
- have a close family member (parent, brother or sister) who has had a heart attack, stent or surgery under the age of 60
- not currently taking a statin drug

You may qualify for an important study investigating the use of coronary scanning to reduce the risk of heart attack or other evidence of arterial disease.

If you are interested and would like further information please email cardiologyCTU@sahmri.com and include your contact details.

Research approved by Human Research Ethics Committee of the Royal Adelaide Hospital
